Canadian statistical review

May 1987

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Electronic Data Dissemination Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montréal	(283-5725)	Regina	(780-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1-800-667-7164
Alberta	1-800-222-6400
British Columbia (South and Central)	1-800-663-1551
Yukon and Northern B.C. (area served by NorthwestTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwestTel Inc.)	Call collect 403-420-2011

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales, Statistics Canada, Ottawa, K1A 0T6.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1987 — \$100.00 Canada, \$120.00 other countries

This Directory is an essential instrument for any regular user of the CANSIM Main Base.

The Directory includes:

- a full list of series on the Base, with both matrix /series and databank identifiers,
- an alphabetical subject index with corresponding matrix numbers,
- a list of subject matter contacts,
- and much other useful information.

A subscription to the 1987 Directory includes notification of any changes to the Base, on a quarterly basis.

Another valuable tool for CANSIM users is the 1987 CANSIM Main Base Cross Reference between Databank Identifiers and Matrix and Series Numbers — \$25.00 Canada, \$30.00 other countries.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
E. Boyko — Director, Electronic Data Dissemination Division
G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: Electronic Data Dissemination Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancées and fiancés. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

- 1. Income and Expenditure Accounts
 - 18 1.1 Gross Domestic Product, Income Based
 - 18 1.2 Gross Domestic Product, Expenditure Based
 - 19 1.3 Gross Domestic Product at 1981 Prices, Expenditure Based
 - 19 1.4 Relation Between Gross Domestic Product at Market Prices, Gross National Product at Market Prices, and Net National Income at Factor Cost
 - 20 1.5 Sources and Disposition of Gross Saving
 - 20 1.6 Sources and Disposition of Personal Income
 - 21 1.7 Personal Expenditure on Consumer Goods and Services by Type of Expenditure
 - 22 1.8 Personal Expenditure on Consumer Goods and Services by Type of Expenditure, at 1981 Prices
 - 22 1.9 Government Sector Revenue and Expenditure
 - 23 1.10 Federal Government Revenue and Expenditure
 - 24 1.11 Provincial Government Revenue and Expenditure
 - 25 1.12 Local Government Revenue and Expenditure
 - 26 1.13 Hospital Revenue and Expenditure
 - 26 1.14 Canada and Quebec Pension Plan Revenue and Expenditure
 - 27 1.15 Implicit Price Indexes, Gross Domestic Product, (1981=100). Seasonally Adjusted at Annual Rates
- 2. Domestic Product by Industry at Factor Cost
 - 28 2.1 Gross Domestic Product by Industry at Factor Cost in 1981 prices, Quarterly
 - 30 2.2 Gross Domestic Product by Industry at Factor Cost in 1981 Prices, Monthly
- 3. Balance of International Payments
 - 37 3.1 Canadian Balance of International Payments, Current Account, All Countries
 - 38 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
 - 39 3.3 Canadian Balance of International Payments, Capital Account, All Countries

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2.

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1.

⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents.

¹The period 1961-1986 was deflated in three time periods 1961-1971; 1971-1981; 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted tax series. ²Includes capital consumption allowances. ³Includes net purchase of existing non-financial assets

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional

Section 6 ■ Manufacturing

- 4 1. Total Inventories, Shipments and Orders in Manufacturing
- 5 2. Manufacturing Shipments by Industry
- 7 3. Manufacturing Inventories by Industry
- 9 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 0 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 1 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 2 7. Tobacco and Beverages
- 3 9. Footwear
- 4 10. Production of Sawn Lumber
- 4 11. Pulpwood, Wood Pulp and Newsprint
- 5 12. Primary Iron and Steel
- 6 13. New Motor Vehicles
- 7 14. Production of Motor Vehicles in Canada
- 8 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1980 standard industrial classification (million dollars)¹. Projected from 1982 Census of Manufactures benchmark.

Year and month	Inventory at end of month									Ratio of inventories owned to shipments
	Shipments ²	New orders received during month ³	Unfilled orders at end of month	Owned ⁴	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished goods

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Non-durable goods industries												Printing publishing and allied
	Total shipments	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Non-durable goods industries													
End of period and month	Total inventories owned	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.
Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

End of period and month	Inventories owned				Inventories held Total			Inventories held raw materials						
	Consumer goods		Con-struction materials and compo-nents	Supple-mentary classi-fication auto-motive products	Consumer goods	Inter-mediate goods and supplies	Export-oriented indus-tries	Consumer goods		Capital goods	Con-struction materials and compo-nents	Inter-mediate goods and supplies	Export-oriented indus-tries	Supple-mentary classi-fication auto-motive products
	Non-durable and semi-durable	Capital goods						Non-durable and semi-durable	Durable

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc plus.

Sources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

²Includes crude oil, condensate and pentanes

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Electronic Data Dissemination Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(983-4020)
Montréal	(283-5725)	Regina	(780-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1-800-667-7164
Alberta	1-800-222-6400
British Columbia (South and Central)	1-800-663-1551
Yukon and Northern B.C. (area served by Northwestel Inc.)	Zenith 0-8913
Northwest Territories (area served by Northwestel Inc.)	Call collect 403-420-2011

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales, Statistics Canada, Ottawa, K1A 0T6.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1987 — \$100.00 Canada, \$120.00 other countries

This Directory is an essential instrument for any regular user of the CANSIM Main Base.

The Directory includes:

- a full list of series on the Base, with both matrix /series and databank identifiers,
- an alphabetical subject index with corresponding matrix numbers,
- a list of subject matter contacts,
- and much other useful information.

A subscription to the 1987 Directory includes notification of any changes to the Base, on a quarterly basis.

Another valuable tool for CANSIM users is the 1987 CANSIM Main Base Cross Reference between Databank Identifiers and Matrix and Series Numbers — \$25.00 Canada, \$30.00 other countries.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- E. Boyko — Director, Electronic Data Dissemination Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: Electronic Data Dissemination Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1

⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents

¹The period 1961-1986 was deflated in three time periods 1961-1971; 1971-1981, 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted tax series. ²Includes capital consumption allowances. ³Includes net purchase of existing non-financial assets.

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note. Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional

Section 6 • Manufacturing

- 74 1. Total Inventories, Shipments and Orders in Manufacturing
- 75 2. Manufacturing Shipments by Industry
- 77 3. Manufacturing Inventories by Industry
- 79 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
- 80 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
- 81 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
- 82 7. Tobacco and Beverages
- 83 9. Footwear
- 84 10. Production of Sawn Lumber
- 84 11. Pulpwood, Wood Pulp and Newsprint
- 85 12. Primary Iron and Steel
- 86 13. New Motor Vehicles
- 87 14. Production of Motor Vehicles in Canada
- 88 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1980 standard industrial classification (million dollars)¹. Projected from 1982 Census of Manufactures benchmark.

Year and month	Inventory at end of month									
	Shipments²	New orders received during month³	Unfilled orders at end of month	Owned⁴	Held but not owned	All inventory held				Ratio of inventories owned to shipments
						Total	Raw materials	Goods in process	Finished goods

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Non-durable goods industries

¹Total inventories owned by manufacturers including warehouse stocks

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Shipments ¹							Unfilled orders at end of month							
	Consumer goods			Con- struction materials and compo- nents	Other inter- mediate goods & supplies	Export- oriented industries	Supple- mentary classifi- cation auto- motive products	Consumer Goods			Con- struction materials and compo- nents	Other inter- mediate goods and supplies	Export- oriented indus- tries	Supple- mentary classifi- cation auto- motive products

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5. Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

End of period and month	Inventories owned				Inventories held Total			Inventories held raw materials							
	Consumer goods	Non-durable and semi-durable	Capital goods	Con-struction materials and compo-nents	Supple-mentary classi-fication auto-motive products	Consumer goods	Inter-mediate goods and supplies	Export-oriented industries	Consumer goods		Capital goods	Con-struction materials and compo-nents	Inter-mediate goods and supplies	Export-oriented indus-tries	Supple-mentary classi-fication auto-motive products
									Non-durable and semi-durable	Durable

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export.

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

¹Gas types are included. ²Includes producers' shipments for export. ³In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. ⁴End of period. ⁵Electric and other. ⁶Excludes apartment type machines. ⁷Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc plus.²Includes crude oil, condensate and pentanes.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Includes export shipments. ²Building Contractors, public and utility construction and structural steel fabricators

Sources: Construction Type Plywood (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Hardboard (36-001), Rigid Insulating Board (36-002), Particleboard, Waferboard and Hardboard (36-003), Primary Iron and Steel (41-001), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Asphalt Roofing (45-001).

Section 9 ▪ Food and Agriculture

- 102 1. Farm Cash Receipts, by Source
- 104 2. Inspected Slaughter, Cold Storage Stocks and Eggs
- 104 3. Farm Input Price Index and Selected Components
- 105 4. Exports of Grains and Livestock Products
- 105 5. Milk
- 106 6. Sugar

Table 1: Farm cash receipts, by source (million dollars)

Year and month	Total cash receipts	Supplementary payments	Total cash receipts from farming operations	Crops

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Electronic Data Dissemination Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(983-4020)
Montréal	(283-5725)	Regina	(780-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1-800-667-7164
Alberta	1-800-222-6400
British Columbia (South and Central)	1-800-663-1551
Yukon and Northern B.C. (area served by NorthwestTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwestTel Inc.)	Call collect 403-420-2011

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales, Statistics Canada, Ottawa, K1A 0T6.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1987 — \$100.00 Canada, \$120.00 other countries

This Directory is an essential instrument for any regular user of the CANSIM Main Base.

The Directory includes:

- a full list of series on the Base, with both matrix /series and databank identifiers,
- an alphabetical subject index with corresponding matrix numbers,
- a list of subject matter contacts,
- and much other useful information.

A subscription to the 1987 Directory includes notification of any changes to the Base, on a quarterly basis.

Another valuable tool for CANSIM users is the 1987 CANSIM Main Base Cross Reference between Databank Identifiers and Matrix and Series Numbers — \$25.00 Canada, \$30.00 other countries.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- E. Boyko — Director, Electronic Data Dissemination Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: Electronic Data Dissemination Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 3 — Tables 3.1-3.4: Balance of International Payments

Please note the restructuring of these tables and that a new selection of series are available with this issue.

Accordingly, the figures from these tables, represented in Section 1 are modified.

Monthly or quarterly data may not add to totals due to rounding.

Section 9 — Table 1: Farm Cash Receipts, by source

Please note that the frequency of this table has been changed from monthly to quarterly in this issue in line with the reporting structure of the source.

Section 1 ▪ Selected Economic Indicators Analytical Summary

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. 1. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

- 1. Income and Expenditure Accounts
 - 18 1.1 Gross Domestic Product, Income Based
 - 18 1.2 Gross Domestic Product, Expenditure Based
 - 19 1.3 Gross Domestic Product at 1981 Prices, Expenditure Based
 - 19 1.4 Relation Between Gross Domestic Product at Market Prices, Gross National Product at Market Prices, and Net National Income at Factor Cost
 - 20 1.5 Sources and Disposition of Gross Saving
 - 20 1.6 Sources and Disposition of Personal Income
 - 21 1.7 Personal Expenditure on Consumer Goods and Services by Type of Expenditure
 - 22 1.8 Personal Expenditure on Consumer Goods and Services by Type of Expenditure, at 1981 Prices
 - 22 1.9 Government Sector Revenue and Expenditure
 - 23 1.10 Federal Government Revenue and Expenditure
 - 24 1.11 Provincial Government Revenue and Expenditure
 - 25 1.12 Local Government Revenue and Expenditure
 - 26 1.13 Hospital Revenue and Expenditure
 - 26 1.14 Canada and Quebec Pension Plan Revenue and Expenditure
 - 27 1.15 Implicit Price Indexes, Gross Domestic Product, (1981=100). Seasonally Adjusted at Annual Rates
- 2. Domestic Product by Industry at Factor Cost
 - 28 2.1 Gross Domestic Product by Industry at Factor Cost in 1981 prices, Quarterly
 - 30 2.2 Gross Domestic Product by Industry at Factor Cost in 1981 Prices, Monthly
- 3. Balance of International Payments
 - 37 3.1 Canadian Balance of International Payments, Current Account, All Countries
 - 38 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
 - 39 3.3 Canadian Balance of International Payments, Capital Account, All Countries

Table 1. Income and expenditure accounts

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1

⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents

¹The period 1961-1986 was deflated in three time periods 1961-1971; 1971-1981; 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted tax series. ²Includes capital consumption allowances. ³Includes net purchase of existing non-financial assets.

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹ A minus sign denotes an outflow of capital resulting from an increase in claims on non-residents or a decrease in liabilities to non-residents. ² Excludes reinvested earnings. ³ When the banks' foreign currency position (booked in Canada) with non-residents is a net asset, series is classified as part of Canadian claims to non-residents.

Note: Components may not add to totals due to rounding.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹The number of persons covered by unemployment insurance is an estimate comprising armed forces personnel, beneficiaries and paid workers from the Labour Force Survey. ²Claimants who receive benefits through the Commission's computer pay system during the reference week. ³Benefits paid for adoption, training, work sharing and job creation claims are included in the total benefits paid. ⁴Annual figures are 12-month averages.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of

workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all

work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries,

the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

*For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Non-durable goods industries												
	Total shipments	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Non-durable goods industries														
End of period and month	Total inventories owned											Paper and allied products	Printing publishing and allied

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

End of period and month	Inventories owned				Inventories held Total			Inventories held raw materials						
	Consumer goods		Con-struction materials and compo-nents	Supple-mentary classi-fication auto-motive products	Consumer goods	Inter-mediate goods and supplies	Export-oriented indus-tries	Consumer goods		Capital goods	Con-struction materials and compo-nents	Inter-mediate goods and supplies	Export-oriented indus-tries	Supple-mentary classi-fication auto-motive products
	Non-durable and semi-durable	Capital goods						Non-durable and semi-durable	Durable

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

¹Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc.²Includes crude oil, condensate and pentanes plus.

¹In 1979, approximately 2,000 municipalities are being surveyed. ²This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Note: Components may not add to totals due to partial revisions.

¹End of period. ²Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. ³Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. ⁴Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. ⁵Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. ⁶Allowance for the take-over of Nova Scotia Light & Power common shares.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Electronic Data Dissemination Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200)
or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(983-4020)
Montréal	(283-5725)	Regina	(780-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

Newfoundland and Labrador	1-800-563-4255
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1987 — \$100.00 Canada, \$120.00 other countries

This Directory is an essential instrument for any regular user of the CANSIM Main Base.

The Directory includes:

- a full list of series on the Base, with both matrix /series and databank identifiers,
- an alphabetical subject index with corresponding matrix numbers,
- a list of subject matter contacts,
- and much other useful information.

A subscription to the 1987 Directory includes notification of any changes to the Base, on a quarterly basis.

Another valuable tool for CANSIM users is the 1987 CANSIM Main Base Cross Reference between Databank Identifiers and Matrix and Series Numbers — \$25.00 Canada, \$30.00 other countries.

CANSIM Mini Base Series Directory, Catalogue 12-569 — \$45.00 Canada, \$54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — \$7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — \$20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

- I.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
- R.E. Drover — Director, Transportation Division
- B.J. Lynch — Director General, Operations Branch
- E. Boyko — Director, Electronic Data Dissemination Division
- G.J. Brackstone — Director General, Methodology Branch

- A. Meguerditchian — Director, International and Financial Economics Division
- L.O. Stone — Director, Population Studies Division
- P.N. Triandafillou — Director, Agriculture/Natural Resources Division
- K. Lal — Director General, System of National Accounts Branch
- P. Schlievert — A/Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: Electronic Data Dissemination Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

INFLATION ADJUSTMENTS TO THE NATIONAL INCOME AND EXPENDITURE ACCOUNTS*

GEORGE HAYDU
NATIONAL ACCOUNTS
DEVELOPMENT DIVISION

1. Introduction

Inflation is a complex phenomenon with a multitude of effects only partly captured in the usual presentations of economic statistics.

In 1984, at the request of the Royal Commission on the Economic Union and Development Prospects for Canada (the Macdonald Commission), the National Accounts Development Division undertook to calculate inflation adjusted savings for the different sectors of the economy. The present study is a continuation of this work. It discusses the rationale for inflation adjustment of the national accounts, describes the data and methods required for adjustments, and reviews some of the results obtained. The study utilizes data from three parts of the Canadian System of National Accounts (CSNA), namely, the National Balance Sheet Accounts (NBSA), the National Income and Expenditure Accounts (NIEA), and the Canadian Balance of International Payments.

The underlying concepts of income and savings flows in national accounting require the exclusion of capital gains and losses. Measured incomes and outlays include interest receipts and payments on

nominally denominated financial assets and liabilities. However, interest payments include a premium charged by lenders for the anticipated decrease in the real value of the principal on account of inflation. The main purpose of this study is to provide measures of income and savings which exclude such inflationary effects. Since the sector framework of the CSNA provides a synoptic view of the economy, the study also gives an overview of an important inflationary effect on the economy as a whole.

The concern about the impact of inflation on financial statements first arose in the field of corporate accounting in the early 1970s. The intent was to provide supplementary income and balance sheet statements in which costs are shown at present rather than at historical cost. Accounting associations in several countries including Canada have issued guidelines for the preparation of such statements.¹

A large number of studies by research groups, government commissions, and departments have applied such guidelines to business financial data by industry to calculate inflation adjusted profits and rates of return. Some of these are Daly (1985), Gilson (1984), Tarasofsky, Roseman & Waslander (1981), Bélanger and McIlveen (1980), Cagan and

* I am indebted to Patrick O'Hagan of the International and Financial Economics Division, Statistics Canada; Gregory V. Jump of the University of Toronto; and Pierre Duguay of the Bank of Canada for their comments. All errors or omissions are the responsibility of the author.

1. Sandilands (1975), FASB (1979), CICA (1982).

Lipsey (1978), Jenkins (1977), and Shoven and Bulow (1975 and 1976).

Inflation adjustment became an issue in national accounting in the late 1970s (Taylor & Threadgold, 1979) and was widely discussed in the early 1980s (Hibbert, 1982), and (Cukierman & Mortensen, 1983).

Inflation may be defined as a sustained increase in the general price level, which decreases the value of money. The increase in prices can be measured by any one of several price indexes as will be discussed in Section 3.3.

Although the high rate of inflation experienced in the early 1980s has subsided, its effect remain in the time series of Canada's national accounts data. To some extent the inflation adjusted measures suggest a different interpretation of these data. Furthermore, the subject is of practical importance since CSNA aggregates are used by government in policy marking, and in general to evaluate the performance of different sectors of the economy.

2. What Is Inflation Adjustment?

Financial assets and liabilities are distributed among different sectors of the Canadian economy. The National Balance Sheet Accounts constitute a system of double entry bookkeeping in which the assets of one sector are the liabilities of another. Therefore, assets equal liabilities for the economy as a whole, but a particular sector can be a net asset holder, while another is a net debtor to other sectors.

Inflation erodes the purchasing power of nominally denominated financial assets and therefore of sectors which are net asset holders or lenders to others. Debtors benefit from inflation since the value of their repayment obligation is correspondingly reduced.

For example, if a lender wishes to obtain a real return of four percent on a loan of \$1,000 and anticipates an inflation rate of six percent, he will charge approximately ten percent or \$100 interest for the loan, since six percent or \$60 are required to compensate for the erosion of the value of his capital from \$1000 to \$940 on account of inflation. The real return is over and above the amount necessary to keep the value of capital intact. If the inflation rate for the period is actually 8% the value of the lender's capital will be reduced to \$920 in real terms. Maintaining its value requires \$80, leaving \$20 as the real return.

The nominal or face value of the loan is \$1000 both at the beginning and at the end of the period for which the eight per cent rate of inflation is observed. It is only possible to detect the decline in the value of an asset in real terms by measuring it at the end of the period in terms of prices which prevailed at the beginning of the period.²

The borrower's gain equals the lender's loss. In the first instance it is \$60, and if the inflation rate rises to 8%, it is \$80. The faster rate of inflation has eroded the value of his debt to a greater degree than anticipated. In either case the smaller repayment obligation remaining represents a gain paralleling the loss of the lender. The amount of the reduction in the value of the asset, or debt for the borrower represents an inflationary transfer or redistribution of purchasing power from the creditor to the debtor.

The lender's anticipated or *ex ante* rate of inflation, implicit in the nominal interest rate at the beginning of the period is difficult to measure and therefore most studies take a retrospective, or *ex post* view. The methodology of this study assumes that the observed return as reflected in unadjusted savings, less the inflationary component revealed *ex post*, equals the adjusted or real return which was actually obtained. The measured real return does not necessarily correspond to the lender's expectation. With reference to the example, the anticipated real return was \$40, but \$20 was actually obtained. This study shows the latter amount.

In view of the foregoing, inflation adjustment can be considered to be the identification of year-to-year changes to economic aggregates resulting from changes in the general price level. The base or reference point for the measurement of changes during a particular year is the price level at the end of the previous year. The price level at the end of a year serves in turn as the base for the measurement of the general change in prices during the following year. In effect each year is treated as an independent unit, or as a separate period of time. This step-wise procedure of adjustment is also known as the chain-index method. By contrast, in constant-dollar national accounting the prices and quantities of a single base year serve as the point of reference for an extended period. For example Gross Domestic Product in constant dollars is published for the 1961-1985 period using 1981 prices as the base.

2. An example is provided on pages 6 and 7.

This study makes two types of inflation adjustments to a number of aggregates in the Canadian System of National Accounts. The adjustment of financial capital was introduced in this section and is elaborated further in Sections 3.3 and 3.4. The second adjustment pertains to non-financial capital, and is discussed in Section 3.5. These adjustments are made in most of the papers which are listed in the Introduction, and may be said to constitute the standard or mainstream approach. Financial and non-financial inflation adjustments are applied to sector savings in Section 4 using a seven-sector framework of the economy. In Section 5 the same adjustments are made to Gross National Product, Net National Income and factor incomes. The subject of Section 6 is additional types of inflation adjustment which have been made in some papers. Section 7 is a summary of the findings.

3. The Measurement of Inflation Adjustment

This section describes the data and methodology required to calculate inflation adjusted savings in Section 4 and adjusted national and factor incomes in Section 5. These calculations are made with the following components:

- (i) income, and savings;
- (ii) domestic and foreign denominated financial assets and liabilities;
- (iii) deflators; and
- (iv) replacement cost depreciation adjustment.

3.1 Income, Expenditure, and Savings

In the National Income and Expenditure Accounts (NIEA) a sector's saving is the difference between its income and its outlay³. As an example, savings in the personal sector is the amount left over after the deduction of current expenditures on goods and services, tax payments and other transfers from income. For business, savings calculated before a deduction for depreciation are gross saving; after the deduction the result is net savings. This study uses the concept of net savings.

3.2 Financial Assets and Liabilities

Data on financial assets and liabilities come from another component of the Canadian System of

National Accounts, the National Balance Sheet Accounts⁴. For the end of each calendar year the financial asset and liability holdings of the different sectors are recorded in a number of categories which represent a variety of financial instruments.

This study uses data on year-end fixed-money assets and liabilities. The term "fixed-money" refers to all financial assets and liabilities which bear a nominal or face value in dollar amounts for their duration; currency, loans, various types of bonds and mortgages, to name the most important. The major instrument not so denominated are stocks.

3.3 Deflator

The choice of deflator or price index is largely dependent on the purpose of an inflation adjustment study and the analyst's view of the economy. A commonly used deflator is the Consumer Price Index (CPI) on the assumption that the purpose of economic activity is consumption, and that the bulk of the national output is consumed rather than invested in the form of capital goods or inventories⁵. Even studies which focus on the corporate sector often use the CPI since the ultimate owners of corporations are individuals. However, the Gross Domestic Product (GDP) deflator is more suited for studies with an overall view of the economy, since it takes into account all prices of domestically produced goods and services. Therefore, the measure of inflation which will be used is the year-to-year percentage change in the GDP deflator (see Figure 1).

3. The annual data which are used in this study can be obtained from *National Income and Expenditure Accounts*, Catalogue 13-201. National and domestic income, and the different types of factor incomes are described in Section 5 of this paper.

4. Statistics Canada. *The National Balance Sheet Accounts 1961-1985*, Catalogue 13-214. Money transactions in the economy during a year are recorded using the same categories in the Financial Flow Accounts.

5. For a good discussion of these issues see (Lützel, 1985).

Figure 1

Year-to-Year Change in the GDP Deflator, 1968-1986*

* Measured from year-end to year-end.

The following example shows how inflation adjusted savings may be calculated using financial asset and liability data and the GDP deflator. (All figures except the GDP deflator are current dollars).

Recorded savings in the NIEA during year t:	\$25,000
---	----------

Fixed-money assets at end of year t-1:	100,000
--	---------

Fixed-money liabilities at end of year t-1:	70,000
---	--------

Net Fixed-money assets	<u>\$30,000</u>
------------------------	-----------------

Index of GDP deflator at end of year t-1:	100
---	-----

Index of GDP deflator at end of year t:	108
---	-----

Inflationary loss on net assets during year t:

$$\frac{100 - 108}{100} \times 30,000 = -2400$$

The value of the financial capital has declined by \$2400 on account of inflation. This loss needs to be replaced from savings in order to maintain the value of the asset.

Therefore inflation adjusted savings for year t are:

$$25,000 - 2400 = 22,600$$

3.4 Foreign Denominated Net Asset/ Liability Adjustment

Because of Canada's trade and financial interaction with other countries a considerable proportion of financial assets and liabilities held by different sectors in Canada are denominated in foreign currencies.⁶ For example, a corporation or provincial government may incur a US\$ denominated liability through a bond issue in the United States. Such instruments require an additional adjustment on account of changes in the exchange rate.

The exchange rate adjustment will be illustrated with two examples. Both cases assume a depreciation of the Canadian dollar from US\$ 0.80 to US\$ 0.75 between consecutive year ends. It takes C\$ 1.25 to buy an American dollar at the end of year $t-1$, and C\$ 1.33 to purchase it at the end of year t .

If a corporation has incurred a liability of \$10,000 in the United States, the depreciation of the Canadian dollar increases the liability:⁷

$$\frac{0.80 - 0.75}{0.80} \times 10,000 = 625$$

The liability is \$10,625 at the end of year t . That is, if the debtor wished to discharge the obligation at the end of the year, he would have to pay \$10,625 compared to \$10,000 at the end of year $t-1$ on account of the decline in the value of the Canadian dollar. This fact needs to be taken into account before the inflation adjustment is applied.

However, there is an offsetting gain due to the erosion of debt through inflation:

$$\frac{100 - 108}{100} \times 10,625 = -850$$

The value of the liability at the end of year t is:

$$10,000 + (625 - 850) = 9775$$

Therefore the net gain on the debt is:

$$10,000 - 9775 = 225$$

6. Approximately 85% of these are denominated in US\$. In the interest of simplicity all such funds are assumed to be denominated in US dollars. These data were provided by the Balance of Payments Sub-Division, International and Financial Economics Division.

7. That is, C\$ 10,000, recorded as such in the NBSA, representing US\$ 8,000 at end of year $t-1$.

There is a net gain because the inflation rate of 8% exceeds the rate of decrease in the value of the C\$, which is 6.25%.

If the \$10,000 had been C\$ denominated, 8% inflation would have reduced its value at the end of year t to \$9,200 for a net gain of \$800. Therefore the debtor's gain is reduced when the value of the Canadian dollar declines.

The effect of the exchange rate adjustment on inflation adjusted savings can be illustrated with the extension of the example in Section 3.2. Suppose that the net fixed-money assets of \$30,000 are composed of \$20,000 denominated in Canadian dollars and \$10,000 denominated in US\$.

Inflationary loss on net C\$ denominated assets during year t :

$$\frac{100 - 108}{100} \times 20,000 = -1,600$$

The exchange rate depreciation increases the value of the US\$ denominated asset by \$625, but there is an inflationary loss of \$850.

Therefore adjusted savings at the end of t are:

$$25,000 - 1600 + (625 - 850) = 23,175$$

It will be recalled that adjusted savings were \$22,600 when all of the \$30,000 are C\$ denominated. Therefore the exchange rate gain compensates for a large part of the inflationary loss, leaving the asset holder in a better position than if all the assets had been denominated in Canadian dollars. However he still suffers an inflationary loss as long as the rate of inflation is greater than the rate of decrease in the value of the Canadian dollar.

As the two examples show, Canadian debtors lose and creditors gain from the depreciation of the Canadian dollar. Similarly it can be shown that Canadian debtors gain and creditors lose when the value of the Canadian dollar increases relative to the US\$. From the perspective of the non-resident sector these relationships are reversed. When the value of the C\$ declines and Canadian debtors lose, a foreign creditor gains. Similarly when a Canadian creditor gains from the interaction of inflation rate and exchange rate changes, a foreign debtor sustains a loss. It should be noted that such gains and losses, while mathematically identical are often of lesser practical importance to non-residents than to Canadians. As an example a large foreign multinational may have a relatively small proportion of its assets invested in Canada.

Data on foreign denominated loans and bonds are only available starting in 1976. Prior to that year these items were counted as C\$ denominated, and the only instruments in the foreign denominated category were currency and international reserves.

Figure 2 shows the evolution of the C\$ - US\$ exchange rate over the period covered by this study.

Figure 2
Canadian Dollar - U.S. Dollar Exchange Rate, 1968-1986

3.5 Capital Cost Allowance (CCA) Adjustment

For accounting purposes businesses distribute the cost of plant and equipment over the estimated life span of the asset. Usually, depreciation or the capital cost allowance is based on the cost of the asset at the time when it was acquired.

This is generally known as book value depreciation in business accounting. If the price of the tangible asset increases it is evident that depreciation will not accurately reflect the annual cost of doing business and to the extent that a business is understating its cost of operation, it is overstating its profits.

This overstatement can be eliminated by taking depreciation at replacement cost, the estimated annual share of replacing a physical asset at current prices.

Therefore the capital cost allowance adjustment is defined as the difference between historical cost depreciation and replacement cost depreciation. It is subtracted from business income as part of the calculations required to arrive at inflation adjusted savings and incomes.

The following is an example:

Net (NIEA) corporate savings for year t:	100,000
Acquisition cost of machine in 1975:	150,000
Annual historical cost depreciation: (Based on estimated service life of 15 years)	10,000
Replacement cost of machine in 1985:	225,000
Replacement cost depreciation:	15,000
Difference between replacement cost and historical cost depreciation:	$15,000 - 10,000 = 5,000$
Net adjusted savings:	$100,000 - 5,000 = 95,000$

Therefore the NIEA savings figure represents CCA at historical cost, while the adjusted number reflects net savings with CCA at replacement cost. It should be noted that this adjustment is not offsetting among sectors, as is the adjustment on financial items. Rather it is always a deduction from a sector's savings and income. Therefore the total of this adjustment for all sectors is a deduction from national income, a topic which is discussed in Section 5.

The adjustment affects three of the seven sectors for which inflation adjusted savings are estimated. It mainly pertains to business plant and equipment for non-farm unincorporated business, and for corporations. Depreciation on farm capital stock and on housing is at replacement cost in the NIEA and therefore no adjustments are necessary for these items. Depreciation in the government sector is also at replacement cost.

4. Inflation Adjusted Sector Savings

4.1 General

This section is concerned with the description and interpretation of the trends in inflation adjusted sector savings with reference to the concepts which were introduced earlier. For a study similar in concept see Jump and Wilson (1986).

The adjustment procedure and its results appear in the nine tables of The Statistical Appendix: seven tables deal with the sectors shown in the middle column of Figure 3 and there are one each for the NIEA sectors Corporate and Government Business Enterprise, and Government.

The organization of all tables is identical. Published NIEA net savings data appear in column 1. Column 2 shows the net fixed money Canadian dollar denominated assets or liabilities of a sector, and column 3 the relevant inflation adjustment, calculated

using the change in the GDP deflator during the year. The same procedure is used in column 5 for the foreign denominated assets or liabilities of column 4, except that the change in C\$ - US\$ exchange rate is also part of the calculation. The sum of the two financial adjustments is shown in column 6. The amounts shown in column 6 are inflationary losses/gains on financial assets/liabilities held by different sectors. These represent capital losses or gains on wealth held in the form of fixed money financial instruments. They also represent a transfer of purchasing power among sectors. Gains and losses are mutually offsetting and therefore net out to zero among all sectors.

The CCA adjustment in column 7 is the difference between historical cost and replacement cost depreciation. It is a deduction from the income and savings of the three sectors concerned. The historical cost and replacement cost data required to calculate it were provided by the Science, Technology, and Capital Stock Division of Statistics Canada.

Column 8 contains the sum of the financial and CCA adjustments. This amount, added to column 1 result in inflation adjusted net savings for a sector (column 9).

4.2 Persons and Unincorporated Business

This sector is by far the largest creditor in the Canadian economy. (Table 1 of the Statistical Appendix). In view of the foregoing discussion it is not surprising that it sustains the largest inflationary losses. These exceeded \$13 billion per year for Canadian dollar denominated assets in the 1979-1982 period of rapid inflation, followed by a sharp drop in 1983 and 1984. Similarly, higher losses are evident during the earlier inflationary peak of 1973-1975. The increase in 1985 and 1986 is due to a combination of somewhat higher rates of inflation than 1984 and the rapidly rising levels of sector net assets.

Adjustments to US\$ denominated assets are extremely small during the first few years on account of the low level of such assets, low inflation rates and steady exchange rates (Figure 2). A decrease in the value of the Canadian dollar results in an increase in the value of US\$ denominated assets, as discussed in Section 3.4. In 1977, 1984 and 1985 when the value of the Canadian dollar declined sharply the gain on these assets was more than sufficient to offset the erosion in the value of the assets due to inflation. The opposite case can be observed for 1970 when an increase in the value of the Canadian dollar nearly quadrupled losses on

foreign denominated assets compared to the previous year. The higher losses in 1979 and 1981 are also associated with increases in the value of the Canadian dollar.

Adjustments on the difference between historical cost and replacement cost depreciation is shown in column 7. The CCA adjustment is smoother and less tightly linked to the annual rate of change in prices than the financial adjustment on account of cumulative price changes over the life span of capital assets. The service life includes years with higher and with lower rates of inflation. Therefore the adjust-

ment tends to be smaller relative to the net inflation adjustment in years with high inflation rates, and larger in years with low inflation rates. An example of the former is 1981 when the CCA adjustment was 9.0% of the financial adjustment. In 1984 the percentage rose to 29.8.

One of the most important macroeconomic aggregates is the personal savings rate. The unadjusted rate is column 1 divided by disposable income. Since the sector is the largest source of savings in the economy, this measure is often regarded as the best single indicator of a national economy's ability to save and invest for future growth. From the perspective of this analysis the effective saving rate of the sector is lowered by the amount of the total adjustment, leading to a much lower adjusted savings rate. The two rates are compared in Figure 4. The effect of inflation during the study period is readily apparent in the large gaps of 1973-75 and 1979-82.

It should be noted that this sector, in addition to persons and unincorporated business includes private non-profit institutions, universities, life insurance reserves, and pension funds. A substantial part of

the sector's savings is attributable to the last two types of institutions. Therefore life insurance and pension funds bear the inflationary losses of the sector to a considerable degree. In other words lower inflation adjusted savings rates not only affect individuals in their roles as consumers in the current period but also the accumulation of assets for their future income security.

4.3 Non-Financial and Financial Corporations

Non-financial corporations constitute the largest debtor sector, (Statistical Appendix, Table 2) with a net liability which is similar in size to the personal sector's assets. Therefore inflationary gains on its C\$ denominated liabilities are about the same size as the personal sector's losses. For example, its gains exceed \$13 billion in 1979-1982. Similarly, higher gains occur in 1973-1975, followed by a decline in the following three years, and a sharp drop in gains is evident after 1982 when inflation abated.

On account of foreign ownership and trade, instruments denominated in foreign currencies are much more significant in this sector than in the personal

Figure 4

Published NIEA and Inflation Adjusted Savings Rates, 1970-1986

sector. Therefore the magnitude of adjustments is considerably greater than in the personal sector. As discussed earlier, debtors gain from a rising C\$ and lose when its value decreases relative to the US\$. In 1979 and 1981 a high level of inflation and a slightly rising dollar resulted in gains of close to \$3 billion for the sector. In 1984 however, a much smaller gain from inflation was more than offset by losses from a sharply falling dollar for a net loss of \$1.7 billion.

Adjustments on the difference between historical cost and replacement cost depreciation play a very important role in this sector. This adjustment has exceeded \$10 billion since 1981. The change in the relative magnitude of the financial adjustment and the CCA adjustment has led, in the past five years, to the reversal of a historical trend of long standing. From 1962 to 1981 the gain on the erosion of the sector's liabilities exceeded the loss due to the CCA adjustment, resulting in a positive total adjustment for the sector (column 8), and adjusted savings in excess of NIEA saving. Since 1982 however, the CCA adjustment has exceeded the net adjustment, resulting in adjusted savings which are lower than national accounts net savings. This result highlights the increasing importance of replacement cost depreciation in relation to corporate and national accounting.

The financial adjustment in the financial corporate sector is small in most years on account of relatively small net C\$ assets, and offsetting foreign denominated liabilities. Furthermore the net C\$ assets are subject to considerable fluctuations, because both the underlying asset and liability figures are very large and similar in size, so that a relatively small change in either or both causes considerable fluctuations in net assets. As the result of these factors there do not appear to be any significant trends in the financial adjustment for financial corporations. However, losses on the CCA adjustment result in a negative total adjustment for the sector for most years.

As the discussion in this section suggests the adjustments for the corporate sector as whole (NIEA definition), are dominated by those of non-financial business. This is further confirmed by the similarity between Tables 2 and 4 of the Appendix.

4.4 Government

Government is the other major debtor sector (NIEA definition) in the economy. At the beginning of 1986, the federal government's total fixed-money liability

was \$174,520 million and that of provincial and local government \$55,044 million. (Tables 5 and 6). As in the case of the non-financial corporations, the federal government obtained a substantial inflationary gain on its liabilities between 1979 and 1982. On account of several years of large deficits the federal debt has risen much more quickly than that of the corporate sector. As a result, the inflationary gains have increased since 1984 after a sharp drop between 1982 and 1983, even though the inflation rate in recent years has been much lower than in the 1979-1982 period than that of 1983.

In addition to the effect on savings, the impact of this gain can be analyzed with reference to the deficit. The amount of the gain can be taken out of the deficit, resulting in an inflation adjusted deficit.⁸ Unadjusted and inflation adjusted deficits based on the data of Table 5 shown in Figure 5.

Inflation adjusted deficits have a number of policy implications.⁹ If a larger deficit is considered to be more stimulative than a smaller deficit, the large deficits of recent years do not provide as much of a boost to the economy as might be expected on the basis of unadjusted figures. To the extent that large deficits are considered to be undesirable in some types of economic analysis, they are not as much of a problem as the unadjusted figures indicate.¹⁰

Provincial and local governments have close to half of their liabilities denominated in foreign currencies, principally in the form of bonds. Because of the importance of these liabilities, the financial adjustment fluctuates considerably in response to changes in the exchange rate. The largest gains were in 1979 and 1981 for the same reasons which were noted for the non-financial corporate sector.

The Social Security Funds sector, namely, the Canada and Quebec Pension plans have large, exclusively C\$ assets. Inflationary losses on these have been large enough in some years to reduce consid-

8. See Dept* of Finance (1983), and Bossons (1978) in the Bibliography.

9. These are discussed in greater detail in Dept. of Finance (1983).

10. Figure 5 shows deficits on an NIEA basis, which differs from the public accounts basis commonly referred to in the media. The difference is mainly due to the inclusion of government agencies and funds whose revenues and expenditures are not included in the public accounts. For further details refer to publication 13-459, Chapter 6, and 13-201, Table 58.

Figure 5

Published NIEA and Inflation Adjusted Federal Deficit, 1970-1986

erably the sector's savings on an adjusted basis. Furthermore these losses are sufficient to offset much of the inflationary gains of provincial and local governments. Therefore, overall the gain of the federal government is the main influence for the NIEA government sector as a whole (Table 8).

4.5 Rest of the World

The Rest of the World or non-resident sector is a substantial net creditor of the others since its fixed-money assets held in Canada are approximately twice as large as Canadian assets held abroad. From the domestic point of view Canada is a net debtor to other nations. The bulk of these assets are foreign denominated, and therefore the foreign currency exchange adjustment plays a more important role in the adjustment of the sector's savings than that of any other. A decrease in the value of the Canadian dollar increases the value of the foreign denominated assets, helping to offset the inflationary losses of the sector. This is evident in 1977, 1984 and 1985. By contrast modest recoveries in the value of the C\$ in 1979, 1981 and 1986 (Figure 2) caused losses on the sector's foreign denominated assets to peak in those years. The results for 1984 and 1985 are of particular interest. The combination of a low rate of inflation in Canada and a rapidly

declining Canadian dollar in terms of the US\$ results in a net gain for the non-resident sector.

When numbers in columns 1 and 9 of Table 9 are positive, the amount of savings shown is available for use by Canadians. Negative figures indicate an outflow of savings from Canada, or a net contribution by Canadians to foreigners. In 1972-1974 and 1979-1980 the inflation adjustment turns positive numbers in column 1 to negative figures in column 9. Therefore a non-resident contribution to Canada on an NIEA basis becomes an outflow on account of the inflationary losses of the Rest of the World sector.

As noted previously, foreign denominated loans and bonds were included with the C\$ counterparts of these instruments before 1976. This characteristic of the source data affects the net adjustment in several of the domestic sectors to some extent. It affects the non-resident sector to a greater degree, so that caution should be exercised in comparing trends in the adjustments before and after 1976.

As discussed in Section 6 the sector's inflationary losses are a gain to Canada's Gross National Product and Net National Income.

4.6 Trends in Inflation Adjusted Sector Saving — Summary

Of the seven sectors used for analysis in this paper, four are net creditors which have sustained inflationary losses in most years since 1961, and three are net debtors which have registered corresponding gains. In terms of magnitude, the major suppliers of funds in the form of savings, and the major losers are the personal and non-resident sectors. The largest borrowers, and gainers on debt are the non-financial corporate, and federal government sectors. The magnitude of losses and gains increases over time, peaking in years with the highest inflation rates, and then diminishing. The losses of the personal sector are increased, and the gains of non-financial corporations are diminished by changing depreciation to a replacement cost basis. For non-financial corporations this adjustment exceeds the gain on the erosion of the sector's debt since 1983, giving the sector net inflationary losses. These losses and the gain of the non-resident sector in 1984 and 1985 are the exception to the above-noted trends.

Losses on financial assets and gains on liabilities represent an inflation induced redistribution of savings among sectors. Sectors identified as sustaining inflationary losses contribute less to national savings than indicated by NIEA figures. Similarly the contribution of sectors with inflationary gains is greater than indicated in published NIEA statistics.

5. The Inflation Adjustment of Gross National Product (GDP), Net National Income (NNI), and Factor Incomes

5.1 General

As discussed in Sections 2 and 3, the same adjustments which have been made to savings can also be applied to income. The National Income and Expenditure Accounts recognize the following types of incomes, known as factor incomes, as part of Net National Product: wages and salaries, corporation profits, interest and miscellaneous investment income, net income of farm operators, and net income of non-farm unincorporated business. This section discusses inflation adjusted GNP and NNI, provides highly summary descriptions of factor incomes, and compares the trends in unadjusted and adjusted factor incomes.

With the recently completed historical revision of the NIEA, Gross Domestic Product (GDP) has become the principal measure of Canada's output of

goods and services. Gross National Product (GNP) remains an important aggregate, and is the appropriate measure for some analytical purposes.

The difference between GDP and GNP may be summarized as follows. The former measures production at market price within the geographical boundaries of Canada. The latter includes returns to Canadian owned factors of production outside Canada and excludes returns to non-residents earned through ownership of productive resources in Canada. The returns in both cases are for the most part corporate business profits, and investment income on financial assets. As noted in Section 4.5 foreign assets in Canada are much larger than Canadian assets in other countries, giving rise to substantial net foreign assets, or a net Canadian indebtedness to the rest of the world. Since inflation adjustments were made to non-resident savings in Section 4, and are made to investment income in this Section including flows between Canadians and foreign nationals, it is clear that GNP is the appropriate concept with respect to inflation adjustment.

5.2 The Adjustment of Gross National Product and Net National Income

Since Canada is a net debtor to the rest of the world, and the value of the debt is being eroded through inflation, future repayment obligations in today's prices are reduced. This reduction is a gain to Canada which is added to GNP to arrive at inflation adjusted GNP (Text Table A). By contrast, in 1984 and 1985 the non-resident sector registered a gain which needs to be subtracted in the calculation of inflation adjusted GDP. The replacement cost depreciation adjustment is not made to GNP since Gross National Product is inclusive of capital cost allowances. Since the identical amount deducted from gross profit must be added back as capital cost allowances, GNP is invariant to the amount charged to capital cost.

Net National Income (NNI) is the measure of national output at factor cost and is equal to the return to the factors of production after an amount has been set aside to maintain the nation's capital stock. Therefore NNI reflects net profits which are exclusive of the capital cost allowance. Since much of the depreciation in the CSNA is at historical cost, an amount equal to the difference between historical cost and replacement cost CCA needs to be deducted from NNI.

The other change needed to arrive at an inflation adjusted Net National Income is the adjustment for Canada's gain on the erosion of the foreign debt.

The CCA adjustment consistently exceeds the gain on debt to non-residents, lowering NNI. As shown in Text Table B the size of the two adjustments was approximately equal in 1979, but the steady rise in the CCA adjustment outpaced the gain on the debt to non-residents even in the other high inflation years of 1980 through 1982. The largest loss to NNI occurs in 1984 on account of a large CCA adjustment and the above mentioned gain of the non-resident sector.

5.3 Adjusted Factor Returns to Capital

National Income and Expenditure Accounts classify returns to capital under a number of different categories. These have been combined into three for analytical purposes: corporations profits, miscellaneous investment income, and unincorporated business income. In the aggregate these categories cover the operating income of all business; and interest, rent, and other types of investment income in the economy.

As a type of factor income, *corporation profits* are those of private corporate enterprises only. The relevant adjustments for corporation profits are the same as for the savings of the corporate sector: namely the gain on the debt and the deduction needed to obtain replacement cost CCA. However, in view of the definition of corporation profits, the adjustments of Table 4 were split into private corporate, and government business enterprises (GBE) components. The private corporate parts of the two adjustments were used to derive adjusted corporation profits. The GBE components are used in the adjustment of investment income. These calculations and the other adjustments to factor incomes are not presented in detail. Instead, Text Table B shows unadjusted factor incomes as a percentage of national accounts NNI, and adjusted factor incomes as a percentage of adjusted NNI. In the 1970s the difference between unadjusted and adjusted profits is much larger in years with high inflation — 4.8% in 1974 — than in years with lower inflation such as 1978. Since 1983 adjusted profits are below the unadjusted percentage — the same relationship which was observed for savings in the corporate sector.

Miscellaneous investment income is mainly the interest and dividend income of persons, of governments, and government business enterprise profits. In the national accounts GBE profits are considered to be part of the investment income of government. Therefore the adjustment takes into account the net assets of the personal sector, the net liability of government and GBEs, and the CCA adjustment for GBEs. Up to 1982 the net assets of the personal sector exert the main influence among these items, resulting in losses ranging from 2.6% for years with low inflation (1976) to 3.2% for periods with high inflation (1981). Since 1983, however, lower rates of inflation and gains on the large and rapidly increasing net liability of government has cut these losses considerably.

The *net income of unincorporated business* refers to the operating income of such business including farming and net rent. Since the net financial assets of persons and unincorporated business have already been used in the adjustment of their investment income, the only adjustment specific to this category is its CCA adjustment.

5.4 Wage and Salary Income, and Summary Analysis

None of the adjustments are applicable to the largest category of income, wages and salaries. However, since adjusted NNI is lower than unadjusted, labour income as the share of the former is higher than it is as the share of the latter. In 1979 when adjusted NNI is almost the same as its unadjusted counterpart, the shares are nearly identical.

In 1984 and 1985, the magnitude of the debt adjustment is small compared to the CCA adjustment so that the latter is the dominant influence in the difference between the unadjusted and adjusted labour income shares (Text Table A). Therefore the adjusted percentages for these years are broadly indicative of the decrease in income which would have been sustained by the owners of capital if they would have made the allowance for depreciation at replacement cost.

1. Net of inventory valuation adjustment (IVA).

2. Including government business enterprise profits, and government investment income.

3. Including net income of farm operators from farm production.

6. Other Types of Inflation Adjustments

The foregoing analysis has been confined to assets and liabilities denominated in fixed dollar amounts. Therefore stocks or equity were omitted. However, stocks are an important part of personal sector as-

sets and corporate liabilities. Although money denomination is lacking, stocks can be adjusted using a suitable index such as the Toronto Stock Exchange (TSE) 300. An example is the following:

\$10,000 worth of stock at end of year t (Balance Sheet Accounts):

TSE 300 at end of t-1: 3000
TSE 300 at end of t: 3150

GDP deflator at end of t-1: 100
GDP deflator at end of t: 108

Gain in value of stock:
 $10,000 \times 3000 - 3150 = (-) 500$

3000

Value of stock at end of year $t = 10,000 + 500 = 10,500$

Value of stock at end of year t in $t-1$ prices:

$$\frac{10,500 \times 100}{108} - 108 = -840$$

$$10,500 - 840 = 9660$$

Reduction in real purchasing power: $10,000 - 9660 = 340$

The value of the stock has been adjusted upwards (a gain of \$500) on account of the rise in the TSE index, but an 8% rate of inflation has reduced its value by \$840 in terms of $t-1$ year-end prices for a net loss of \$340. This example illustrates the major question with respect to stocks in the literature on inflation adjustment;¹¹ in the long run, do increases in stock prices at least equal the rate of inflation so as to prevent the inflation adjusted value of equity from decreasing?

In addition to stocks, the value of several types of fixed-money instruments also varies with price changes in financial markets. For example, an increase in the yield of \$1000 bond from 10 to 12.5 per cent in a year would cause its value to decline to \$800 in accordance with the formula.¹²

$$P_t = \frac{P_t - 1}{\frac{I_t}{I_t - 1}}$$

where P represents the price of the bond and I represents interest yield. An 8% rate of inflation would further erode the value of the bond to \$736. Therefore, the total loss to the bond holder is \$264 compared to the \$80 adjustment which is made in Section 3. The market value movements of bonds differ in an important respect from those of stocks. As long-term bonds approach maturity their value approaches the face value, diminishing the effect of interest rate fluctuations. The face value is obtained at redemption. Value changes for stocks are not subject to such a constraint.

This approach can be extended to the use of different deflators for bonds and mortgages with varying terms to maturity. In all cases, however, the same general index (GDP deflator, CPI, or other) is used to make an inflation adjustment.¹³

These examples suggest other applications. In one case Eisner and Pieper (1984) used an issue price to market value adjustment of the U.S. federal debt as part of the calculation of an inflation adjusted deficit.

In addition to financial assets the National Balance Sheet Accounts also contain estimates of tangible assets. These are residential and non-residential structures, machinery and equipment, consumer durables, inventories and land. Adjustments to tangible assets have been done by Sunga (1987). As in the case of stocks such adjustments require an asset-specific deflator which adequately reflects changes in the market value of the asset, and the GDP deflator. For example, if the inflation rate is 8%, but the value of the housing stock has increased by 12% over a year, a residential structure worth \$100,000 at present will be worth \$103,040 a year later.

This section has extended the scope of inflation adjustment from fixed money denominated instruments to shares and to tangible assets. The concept of asset-specific deflators was introduced. Overall, there is a good case for making both asset specific and general price level adjustments as part of a comprehensive set of adjustments to income and savings.

7. Summary

This study has reviewed some inflationary effects on the Canadian economy which are not readily apparent in the National Income and Expenditure

11. Good discussions can be found in Cagan & Lipsey (1978), and Pesando (1977).

12. This formula is an approximation.

13. For an application to corporate income see Cagan & Lipsey. Hill (1984) advocates bond and share adjustments to income in national accounting.

Accounts. Inflationary impacts are demonstrated with the aid of two types of adjustments.

The first is the gain for debtors as the value of debt is eroded by inflation. Creditors on the other hand are adversely affected as the real value of their financial capital suffers a corresponding decrease. Some sectors, mainly persons and non-residents are creditors, while governments and corporate business are debtors. Therefore an inflation induced redistribution of purchasing power and of wealth takes place. In this analytical framework sectors which have sustained inflationary losses do not contribute as much to national savings as published NIEA data indicate, while the contribution of sectors with inflationary gains is understated.

The second adjustment pertains to the difference between depreciation on non-financial assets at their original acquisition cost and at current or replacement cost. If in periods of high or sustained inflation capital cost allowances are based on historical cost, the allocation of profits from operating surplus will be too high. In this study an additional amount is deducted from business income and savings and from national income to derive adjusted versions of these aggregates which include a full allowance for replacement cost. Up to 1982 corporate sector savings, have registered an overall inflationary gain. Since 1983 however the adjustment required to place depreciation on a replacement cost basis has exceeded the net financial gain on the erosion of corporate debt resulting in an overall inflationary loss.

The recipients of different types of factor incomes are also affected, Corporations profits are larger on

an adjusted basis, except in 1983-1986 than in the NIEA. Investment income, mostly attributable to persons until recent years, is negatively affected. However, the rapidly increasing net liability of government and lower rates of inflation in the past four years has reduced inflationary losses to investment income. Inflation adjusted Gross National product is higher in most years than published national accounts figures indicate, since Canada gains on the reduction in the real value of its foreign debt.

Inflation induced modifications to standard NIEA measures are of some significance since several of these aggregates are commonly used to evaluate the performance of parts of the economy. It is shown that inflation adjusted personal savings rates and federal government deficits are both lower than their NIEA counterparts. One implication is that the federal deficit may not be as stimulative as the measures usually employed by analysts and policy makers indicate.

This study also deals with a number of other aspects of inflation and of inflation adjustment. Of these the concepts of *ex ante*, or anticipated rates of inflation, and that of the *ex post* measurement of inflationary effects are essential. This type of study shows in retrospect what creditors' inflationary losses were in the past. It is believed that showing these losses and the corresponding debtors' gains in a consistent framework for the economy constitutes a worthwhile contribution in the analysis of the evolution of important macroeconomic variables in the past, as well as an indication of their response to different rates of inflation in the future.

Gross Domestic Product

First Quarter 1987

In the first quarter of 1987, Gross Domestic Product rose 2.9% to a level of \$534.3 billion, seasonally adjusted to annual rates. After allowing for a 1.3% increase in prices, real GDP expanded by 1.5%. This marked the seventeenth consecutive quarterly increase and the largest in over a year. Demand rose in all the major sectors of the economy; unlike the previous two quarters, the increase in demand was met more by higher domestic production than by increased imports or lowering of inventories.

Domestic and export demand each grew by 1.5% in volume in the first quarter. The largest gains occurred in residential construction and business investment in plant and equipment. Consumer spending also picked up, after slackening in the fourth quarter. Part of the gain in exports reflected the end of labour disputes in grain transportation, and resulted in sharply lower farm inventories. In terms of incomes, there were large increases in total labour income and corporate profits.

Residential construction continued to strengthen, up 4.8% in volume, compared with increases of about 3% in the previous two quarters. The first quarter growth was widespread by type of spending, as new housing construction, commissions on the resale of houses, and alterations and improvements all rose. Housing activity continued to be highly concentrated in central Canada, and was accompanied by large increases in housing prices.

Business investment in plant and equipment posted a 3.5% increase in volume, the largest increase since mid-1985. Both non-residential construction and machinery and equipment rose, the first time the two have risen in the same quarter in the past year. The 5.1% gain in machinery and equipment was most evident in imported components. The rise

in non-residential construction reflected higher building construction and gradual recovery in expenditures on exploration and development of oil and gas, after large drops in mid-1986.

Constant dollar personal expenditure on goods and services grew by 1.1%, with spending on services rising by 1.6% and goods by 0.7%. The change in spending on services was led by higher travel expenditure abroad, while the increase for goods was concentrated in spending on durable goods, notably motor vehicles. Higher purchases of durable goods were associated with lower interest rates and little price increase, particularly as auto rebates proliferated. Relatively rapid price increases of 1.5% for non-durable goods — notably for energy products — accompanied lower consumption of these goods.

Net exports of goods and services rose by \$0.9 billion in 1981 dollars, as exports rose slightly faster than imports. Most of the 1.5% gain in exports was accounted for by a resumption of grain shipments and by higher exports of fabricated materials. Exports of end products eased slightly, as non-automotive shipments fell, while demand for crude materials such as oil remained weak. Virtually all of the gain in imports reflected higher demand for machinery and equipment and crude materials such as metal ores and crude oil.

Business non-farm inventories rose by \$1.5 billion in volume. Increased stocks in the trade sector offset reductions in manufacturing stocks, particularly raw materials. Manufacturing production surged ahead by 2.4% in the first quarter, following the run-down of inventories in the second half of 1986. Farm inventories declined by \$1.1 billion, reflecting higher grain exports and lower estimates of the new crop.

The implicit price index for GDP increased by 1.3% in the first quarter; excluding changes in inventories, the implicit price index for GDP rose by a more moderate 1.0%. Export prices declined by 1.1%, the sixth consecutive quarterly decline. Prices for personal domestic demand rose 0.9%, as import prices declined for the fourth consecutive quarter. A higher exchange rate for the Canadian dollar in the first quarter served to dampen most import prices.

Total labour income grew by 2.0%, the largest quarterly gain over a year. The increase was led by goods-producing industries, up 3.0%, notably mining and manufacturing. Much of the strengthening in overall labour income reflected higher employment. In contrast to the strong growth in labour income, personal income grew only 1.3% as net farm income fell sharply. This, combined with an increase of 2.0% in personal expenditure on goods and services, led to a drop in the savings rate from 10.5% to 9.5%.

Corporate profits before taxes increased by 6.4%, the second straight large increase. Profits stood 19% above the level of a year earlier, the largest yearly increase in over two years. Increases were widespread among industrial corporations.

Total government sector revenue, on a national accounts basis, rose by 1.0%. Increased revenues originated in higher indirect tax collections and personal direct taxes. Total government expenditure was little changed in the quarter, as transfer payments to persons and interest payments on the public debt declined. The overall government sector deficit, seasonally adjusted at annual rates, narrowed from \$28.4 billion to \$25.6 billion.

Available on CANSIM: matrices 6701-6741, 6641-6642.

A printout containing all tables is also available on the day of release from the Income and Expenditure Accounts Division (\$35/\$140).

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census, see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. ²Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. ³Includes logging, fishing, trapping and hunting. ⁴Includes mechanical and construction. ⁵Includes a small number in non-specified occupations. ⁶Beginning with 1978 includes fiancés and fiancées. ⁷Does not include students entering Canada on students' visas. ⁸Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 • System of National Accounts

1. **Income and Expenditure Accounts**
 - 1.1 Gross Domestic Product, Income Based
 - 1.2 Gross Domestic Product, Expenditure Based
 - 1.3 Gross Domestic Product at 1981 Prices, Expenditure Based
 - 1.4 Relation Between Gross Domestic Product at Market Prices, Gross National Product at Market Prices, and Net National Income at Factor Cost
 - 1.5 Sources and Disposition of Gross Saving
 - 1.6 Sources and Disposition of Personal Income
 - 1.7 Personal Expenditure on Consumer Goods and Services by Type of Expenditure
 - 1.8 Personal Expenditure on Consumer Goods and Services by Type of Expenditure, at 1981 Prices
 - 1.9 Government Sector Revenue and Expenditure
 - 1.10 Federal Government Revenue and Expenditure
 - 1.11 Provincial Government Revenue and Expenditure
 - 1.12 Local Government Revenue and Expenditure
 - 1.13 Hospital Revenue and Expenditure
 - 1.14 Canada and Quebec Pension Plan Revenue and Expenditure
 - 1.15 Implicit Price Indexes, Gross Domestic Product, (1981=100). Seasonally Adjusted at Annual Rates
2. **Domestic Product by Industry at Factor Cost**
 - 2.1 Gross Domestic Product by Industry at Factor Cost in 1981 prices, Quarterly
 - 2.2 Gross Domestic Product by Industry at Factor Cost in 1981 Prices, Monthly
3. **Balance of International Payments**
 - 3.1 Canadian Balance of International Payments, Current Account, All Countries
 - 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
 - 3.3 Canadian Balance of International Payments, Capital Account, All Countries

¹Includes military pay and allowances. ²These aggregates differ from those shown in earlier publications in that they are on a "domestic" basis and thus include interest and dividends paid to non-residents and exclude interest and dividends received from non-residents. ³Includes profits (net of losses) of government business enterprises and other government investment income. ⁴Includes value of physical change in farm inventories. An adjustment has been made to take account of the accrued earnings of farm operators arising out of the operations of the Canadian Wheat Board. Book value of inventories is deflated to remove the effect of price changes and the derived physical change is then valued at average prices of the current period to obtain the value of physical change. The difference between this value of physical change and the change in book value is called the inventory valuation adjustment. ⁵See footnote 3, Table 1.2

¹Includes outlay on new durable assets such as building and highway construction by governments other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. ²Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. ³The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment (shown in Table 1.1). ⁴See footnote 4, Table 1.1.

⁵Excludes investment income received from non-residents. ⁶Excludes investment income paid to non-residents.

¹The period 1961-1986 was deflated in three time periods 1961-1971; 1971-1981, 1981-1986 with price indexes based on 1961, 1971 and 1981 respectively. The prices were then linked arithmetically at the major group, component and total levels to the 1981 base. The linking process produced residual differences between the sum of the linked groups and linked aggregates. These differences are shown as adjusting entries. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents

¹The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted tax series. ²Includes capital consumption allowances. ³Includes net purchase of existing non-financial assets.

¹These implicit price indexes derived by dividing the value figures in current dollars by the constant dollar figures, are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data for seasonality and therefore may be used as indicators of price changes. ²Excludes investment income received from non-residents. ³Excludes investment income paid to non-residents.

¹The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. ²The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

¹Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.

²The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. ³The number of person-days is calculated by multiplying the number of workers involved in a work stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. ⁴The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. ⁵Includes publishing and allied industries. ⁶Includes storage and communication industries.

¹These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. ²Includes water, fuel and electricity, and traveller accommodation. ³Excludes water, fuel and electricity.

* For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

¹Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. ²Shipments of goods manufactured within the establishments. ³Total new orders received during the period at estimated selling value, net of cancellations. ⁴Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments¹ by industry based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

Year and month	Non-durable goods industries												
	Total shipments	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

¹Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available
Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars). Projected from 1982 Census of Manufactures benchmark.

End of period and month	Inventories owned				Inventories held Total			Inventories held raw materials							
	Consumer goods		Con-struction materials and compo-nents	Supple-mentary classi-fication auto-motive products	Consumer goods	Inter-mediate goods and supplies	Export-oriented indus-tries	Consumer goods		Capital goods	Con-struction materials and compo-nents	Inter-mediate goods and supplies	Export-oriented indus-tries	Supple-mentary classi-fication auto-motive products	
	Non-durable and semi-durable	Capital goods						Non-durable and semi-durable	Durable

¹Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. ²Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ³Customs exports. ⁴Mill shipments destined for export

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

¹Data compiled according to the Steel Distribution Index revised January, 1964. ²Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ³Excluding shipments for re-processing at maker's own plant. ⁴Data compiled as submitted by the steel producers according to the steel industry distribution code

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

¹In 1979, approximately 2,000 municipalities are being surveyed so historical comparisons are possible

²This is an historical series with data available back to 1920. Consistent coverage and volume have been maintained

¹ A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

¹Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. ²The major groups include additional components than the selected ones shown.

Section 11 • External Trade

1. Merchandise Trade on a Balance of Payments Basis
 - 4 1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
 - 4 1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
 - 5 1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis
 - 5 1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis
 - 6 1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
 - 8 1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
2. Merchandise Trade on a Customs Basis
 - 10 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
 - 11 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
 - 12 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis
 - 14 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

1—Merchandise trade on a balance of payments basis

¹Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). ²The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). ³For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

¹Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled \$500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.
